Supply Device

ABSTRACT OF THE DISCLOSURE

The invention relates to a supply device for the supply of pressure fluid into at least one vehicle brake or into a pressure fluid accumulator, wherein a piston 2 is movably arranged in an accommodating member [[4]], a carrier [[6]] bears a non-return valve 7 arranged coaxially to the piston 2 for the purpose of ventilating a working chamber 11 into which the piston plunges 2, and wherein a resetting spring 5 is arranged between the carrier [[6]] and the piston 2.

It is the essence of the invention that a multi-piece cage 16 allows inserting the resetting spring 5 into the cage parts 17,18, the cage parts 17,18 comprise fastening means 20 that lock the cage 16 due to relative displacement of the cage parts 17,18, and the resetting spring 5 is caged and simultaneously elastically preloaded under the relative displacement of the cage parts 17,18.
